

ABSTRACT OF DISCLOSURE

This invention is related to a printing method and apparatus for recovering an error and a computer-readable recording medium for storing a computer program. The printing method includes storing intermediate data corresponding to a document to be printed, converting the intermediate data into printing data, determining whether an error has occurred while the intermediate data is converted into the printing data, and when determined that an error has occurred, converting the intermediate data into image type data and converting the image type data into the printing data. Here, the document is printed using the printing data.
